## Easing the load for merchants

CombiLift is the world's leading supplier of 4-way handling solutions, offering lift capacities from 2.5 to 25 tonnes, with a choice of diesel, AC electric or LPG power. Versatility, reliability, safer and space saving handling are hallmarks of the CombiLift range, which contribute to improved productivity and efficiency.

With the ongoing addition of more models to its range, CombiLift continues to blaze the trail in the 4-way and narrow aisle handling sector. There are now over 14,500 units in operation worldwide, with an extensive global dealership network across more than 50 countries.

The builders' merchant sector was one of the first to recognise the benefits of CombiLift's tailor made approach to materials handling, and the range of products on offer is as varied as the differing requirements in the industry itself. Long lengths of timber, palletised goods, sheet materials, roofing, decking or fencing products – whatever you need to handle there is a CombiLift model that can deliver the goods.

"Our ability to react to customer feedback and develop tailor made handling solutions of any size is what sets us apart from other forklift manufacturers" comments MD Martin McVicar. "Since we launched our first C4000 CombiLift – which is incidentally still one of our best sellers – we now offer models from 2.5t upwards with an almost infinite choice of options for a truly customised product. Our range encompasses 4-way sideloaders, stand-on models for extremely narrow aisle operation, the large cab XL series as well as the core CombiLift C range in varying load capacities."

With over 16 base models and a wide choice of options and attachments, Combilift offers the most comprehensive range of innovative handling solutions on the market.

Here's a taste of what we offer:

### C series

The C4000 was the first Combilift to be produced when the company was established 13 years ago and paved the way for Combilift's further product development. The C series, available with capacities from 2.5 to an impressive 25 tonnes is still a best seller. This versatile and robust workhorse is equally at home inside and out, in confined spaces and on semi-rough terrain, in all weather conditions. Lift heights of up to 9.5m enable optimum use of your available storage space.

### 4-way sideloader

Combilift's 4-way sideloaders were developed following requests from conventional sideloader users for a more manoeuvrable truck able to provide better storage density and block stack whilst working in pre-existing aisle widths. Combilift sideloaders are available with capacities from 4.5 to 6t, a wide range of options and a choice of front or rear cabs.

### Combi-CB

This award winning compact multi directional counterbalance truck is designed to handle a mix of longer loads as well as palletised goods and is therefore ideal for the requirements of the merchant sector. With 2.5, 3 or 4t capacities, it makes light work of your loads in the yard and storage areas.

### Aisle-Master

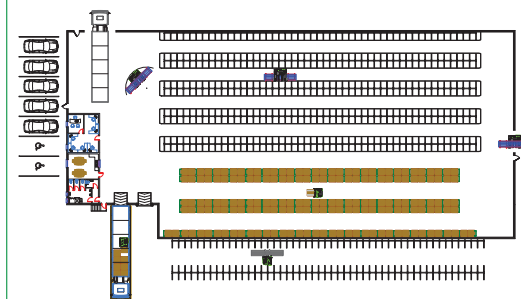

The Aisle-Master is a relative newcomer to Combilift's product range. Its articulated design enables it to work in extremely narrow aisles, making the most of even the most limited storage space. Renowned for build quality and reliability, Aisle-Masters are available with AC electric or LPG power options and capacities from 1.5 – 2.5 tonnes.

## Free warehouse layout service

When it comes to planning the best layout for your storage area, why not leave it to the experts and contact Combilift. The company's team of highly qualified and experienced design engineers will analyse your requirements and supply you with free plans, enabling you to make the most of your space.
